

The Re-TRAC suite of DATA MANAGEMENT SERVICES

Re-TRAC™ offers a suite of fully integrated, web-based data management services for the waste and recycling sector which streamline and improve the data collection, analysis, and reporting process.

Re-TRAC additional services include:

- ▶ **ON-LINE SURVEY SYSTEM**
- ▶ **TRANSACTION SYSTEM**
- ▶ **ON-LINE HHW APPOINTMENT SYSTEM**
- ▶ **Re-TRAC for Institutions**

On-Line Survey System

The **On-Line Survey System** allows public sector clients to collect waste and recycling surveys from commercial/institutional/industrial generators, processors, disposal facilities, haulers and multi-family dwellings. Re-TRAC staff will configure your survey screen to match your requirements. You then provide the log-in information to survey respondents, who go to the website, complete the form, and submit their information.

Administrators can view submitted surveys individually or generate summary reports that aggregate and summarize the responses. For Re-TRAC clients, tonnage data is automatically linked to the proper material information pages in the appropriate sector.

The On-Line Survey System offers many benefits to our clients. Just one year after they began using the system, one Re-TRAC client in Ohio realized these results:

- ▶ More than twice as many commercial and industrial businesses were surveyed the year the Re-TRAC On-Line Survey System was introduced;
- ▶ The number of submitted surveys increased by 55%;
- ▶ Total reported tonnages increased by 27%;
- ▶ The cost was virtually the same as previous years.

Transaction System

The **Transaction System** allows Re-TRAC clients to import data from weigh-scale software used at landfills, transfer stations, and other facilities. Weigh scale data is then automatically combined in Re-TRAC with other sources of recycling and solid waste information. With all data centralized, Re-TRAC becomes a powerful tool for efficiently organizing, managing, and analyzing all of your waste management information.

The Lancaster County Solid Waste Management Authority is using the Transaction System as part of their Re-TRAC package. *"From the very beginning we were impressed with this system,"* said Tim Breneisen, Recycling Manager at the Authority. *"Here is a tool that can consolidate your information in a way that has never been done before."*

Re-TRAC Reps

Our network of Certified Re-TRAC Service Providers is expanding throughout the United States and Canada. Call or email today and learn how we can help you.

On-Line HHW Appointment System

The On-line HHW Appointment System allows residents to register on-line for appointments to drop off material at local HHW drop off events or depots. Residents register at a website customized to client requirements. Key features include:

- ▶ **Auto registration:** Significantly reduces staff time required to manage the scheduling process;
- ▶ **Confirmation emails:** Automatically sent after residents have submitted their information, and can include directions to the site and any applicable fee information;
- ▶ **On-line changes in real time:** County staff can print lists and change details on-line and in real time on the day of the event;
- ▶ **Material totals:** Automatically tallied and organized for easy reporting.

The On-line HHW Appointment System is a popular system for public sector clients who want to save time and efficiently manage program costs and liabilities.

Re-TRAC for Institutions

Are you a College or Hospital Administrator, or a Manager responsible for environmental operations in a company? Do you collect information and report on waste and recycling programs? Then you need to know about the Re-TRAC features developed specifically for institutions!

Re-TRAC offers features that have been developed for universities & colleges, hospitals, and the corporate sector. Easily collect, organize, analyze, and report waste and recycling data from your university, college, hospital, or business using Re-TRAC. Information can be collected at the dumpster level and then organized and aggregated by dumpster, building, or department. For colleges and universities, campus-wide summaries are also available as are multi-campus college or university totals if your organization has more than one campus location.

Using the institutional features of Re-TRAC, clients can prepare monthly or annual reports at the click of a button as well as generate program performance and trend reports, and enjoy a cost-effective and maintenance free system.

Bring this technology to your institution, and be in a better position to make decisions towards sustainability!
